

AI-ASSISTED INVENTORY INSIGHTS FOR HIMSHAKTI

Business Problem

1. Inventory losses due to expiry and poor monitoring.
2. Need data-driven inventory decisions.
3. AI + BI used to identify actionable insights.

DATASET OVERVIEW

Source: HimShakti Inventory Dataset

Records: 1000

Columns: Batch_ID, Raw_Material, Entry_Date, Expiry_Date, Quantity_KG, Remaining_Quantity_KG, Production_Date, Finished_Good, Shelf_Life_Days

Objective: Reduce inventory waste and improve planning.

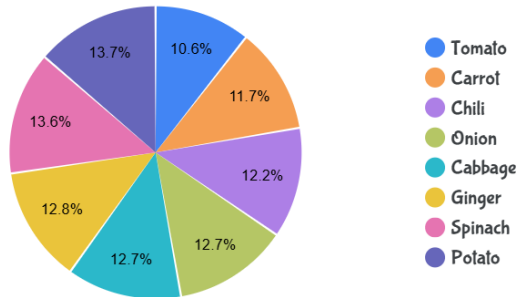

KEY FINDING

Finding:

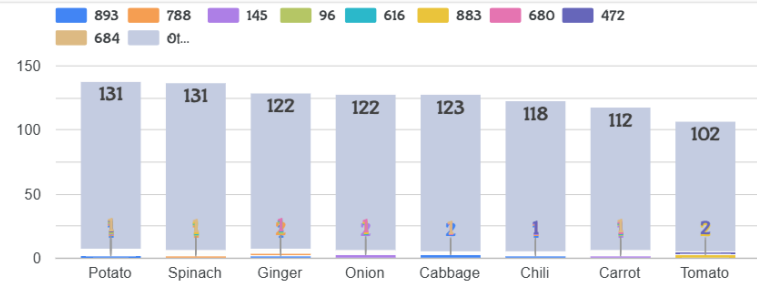

Some raw materials have much higher remaining inventory, indicating uneven utilization and possible expiry risk.

SO WHAT?

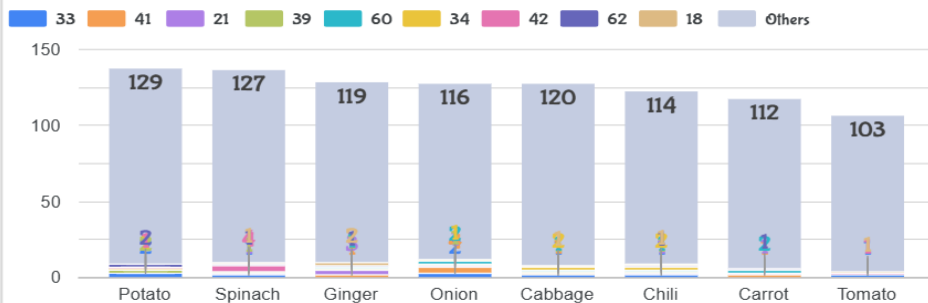

Raw Material Distribution

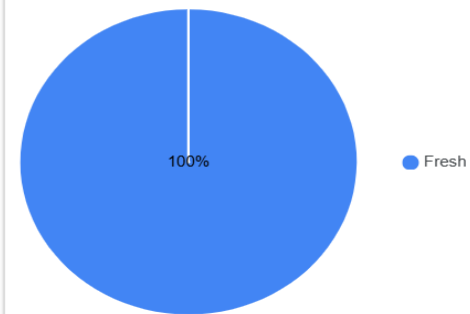

Total Quantity by Raw Material

Remaining Stock by Raw Material

Expiry Status Overview

Excess stock increases expiry risk and storage cost. Monitoring inventory levels helps improve procurement, production planning, and operational efficiency.

RECOMMENDATIONS

1. Enable expiry alerts.
2. Review inventory weekly.
3. Monitor KPIs using BI dashboards.
4. Optimize procurement based on inventory consumption.
